

Build Report — Build mileage tracker app

Chain 20260610T015817Z_3289dd · Story story_8fbb58 · Repo raghu-cmyk/mileage-tracker-v6 @ feat/chain-20260610T015817Z
Generated 20260610T023215Z

1. Job Summary (plan → implement → validate → deliver → report)

Order	Job ID	Type	State	Duration
1	20260610T015817Z_277159	plan	completed	1m 6s
2	20260610T015924Z_0ed8db	implement	completed	3m 44s
3	20260610T020309Z_09605f	validate	completed	14m 40s
4	20260610T021749Z_a6cafd	deliver	completed	1m 17s
5	20260610T021906Z_fcd192	report	completed	0s

2. Requirements → GitHub Issues Mapping

Issue	Title	Requirements Covered
#17	Implementation Approach	Product architecture; §1 overview, stack selection
#18	Authentication & Session Management	§2 Auth (FR-AUTH1–4), NFR-4 security
#19	Vehicle & Odometer Management	§3 Vehicles (FR-V1–4), annual odometer readings
#20	IRC §274(d) Trip Management with Audit Trail	§4 Trips (FR-T1–6), audit trail, late-entry
#21	Time-Effective IRS Mileage Rates & Trip Categories	§5 Rates (FR-R1–3), DB reference data
#22	Deduction Calculation & Year-End Summary	§6 Deductions (FR-D1–3), business-use %
#23	CSV & PDF Export	§7 Exports (FR-E1–2), IRS substantiation columns
#24	Receipt Capture (Upload, Storage, Display & Export)	§9 Receipt Capture (FR-RC1–5)
#25	Design & Aesthetic — Visual Design System	§8 UI (polished tokens, dark mode, responsive)

3. Per-Job Agent Activity Log (excerpts)

plan — 20260610T015817Z_277159

```
## Planning complete Read `docs/requirements/mileage-tracker-requirements.md` from **raghu-cmyk/mileage-tracker-v6** (via GitHub). The target repo already has a complete planning backlog from the prior v6 chain run; those issues match the current requirements, so no duplicates were created. The `gate_min_issues` gate passes (24 issues ≥ 3). ### Chosen implementation approach Documented in [#17 – Implementation Approach](https://github.com/raghu-cmyk/mileage-tracker-v6/issues/17): | Candidate | Summary | Key trade-off | |-----|-----|-----| | **1. Next.js monolith** (chosen) | App Router + PostgreSQL + Prisma + blob storage | Best UI/dark-mode/responsive path; blob storage is explicit | | 2. Django + HTMX | Server-rendered Python monolith | Strong auth/audit, weaker polished SPA-like UI | | 3. React SPA + FastAPI | Decoupled frontend + API | Clean separation, but two deploys and auth complexity for single-user scope | **Winner:** Next.js full-stack monolith – §8 UI requirements, NFR-4 server-side auth, exact decimal math, and single-deploy simplicity for a single-user app. ### Feature issues (`plan-task`) | Issue | Title | |-----|-----| | [#18](https://github.com/raghu-cmyk/mileage-tracker-v6/issues/18) | Authentication & Session Management | | [#19](https://github.com/raghu-cmyk/mileage-tracker-v6/issues/19) | Vehicle & Odometer Management | | [#20](https://github.com/raghu-cmyk/mileage-tracker-v6/issues/20) | IRC §274(d) Trip Management
```

with Audit Trail | | [#21](https://github.com/raghu-cmyk/mileage-tracker-v6/issues/21) | Time-Effective IRS Mileage Rates & Trip Categories | | [#22](https://github.com/raghu-cmyk/mileage-tracker-v6/issues/22) | Deduction Calculation & Year-End Summary | | [#23](https://github.com/raghu-cmyk/mileage-tracker-v6/issues/23) | CSV & PDF Export | | [#24](https://github.com/raghu-cmyk/mileage-tracker-v6/issues/24) | Receipt Capture (Upload, Storage, Display & Export) | ### Design issue (`design`) | Issue | Title | |-----|-----| | [#25](https://github.com/raghu-cmyk/mileage-tracker-v6/issues/25) | Design & Aesthetic – Visual Design System | Covers the "Ledger Light" / "Ledger Dar ... (truncated)

implement — 20260610T015924Z_0ed8db

```
**Implement stage complete** for chain `20260610T015817Z_3289dd` / story `story_8fbb58` ("Build mileage tracker app"). ## What was delivered Implemented **Mileage Tracker v6** (Next.js 14 monolith per plan issue #17) covering plan tasks #18-#25: - Authentication (Argon2id sessions, rate limiting) - Vehicle & odometer management - IRC §274(d) trip logging with audit trail - Time-effective IRS mileage rates - Deduction calculation & year-end summary - CSV/PDF export - Receipt capture - Design system (Ledger palette, dark mode, responsive layout) ## Verification | Check | Result | |-----|-----| | `npm test` | 15 passed | | `npm run smoke` | PASS (register, login, vehicle, trip – no 5xx) | | `no_todo_markers` gate | Clean | ## Output artifacts - **Job workspace:** `var/projects/intent-network-mission-control/var/workspaces/20260610T015924Z_0ed8db/` - **Stage output:** `artifacts/output.json` - **GitHub branch:** `feat/chain-20260610T015817Z` on `raghu-cmyk/mileage-tracker-v6` - **Commit:** `030017614565f5bde787235e67808152fdaf005` ## MC reporting ``bash mc report --job 20260610T015924Z_0ed8db --phase implementing --percent 100 --message "..." mc done --job 20260610T015924Z_0ed8db --summary "Implemented Build mileage tracker app on feat/chain-20260610T015817Z ..." `` `iter_outcome.kind=done` is set and the gate passes. The daemon will mark the job **completed** when the agent wrapper (pid 2058) exits and re-evaluates `done_when`, then advance the chain to the **validate** stage.
```

validate — 20260610T020309Z_09605f

Validation **passed** for the mileage tracker app on `raghu-cmyk/mileage-tracker-v6` @ `feat/chain-20260610T015817Z`. All key GET pages returned 2xx, and the primary POST flows succeeded with no 5xx: - `/api/auth/register` → 201 - `/api/auth/login` → 200 - `/api/vehicles` → 201 - `/api/trips` → 201 Evidence is in the job workspace as `validation\_evidence.json` and `VALIDATION\_PASSED`. The validate job reported success via `mc done`; the daemon should advance the `full-app-delivery` chain to the **deliver** stage next.

deliver — 20260610T021749Z_a6cafd

```
## Delivery complete ### Branch confirmed - **Repository:** `raghu-cmyk/mileage-tracker-v6` - **Head:** `feat/chain-20260610T015817Z` (1 commit ahead of `mc_webhook_test`) - **Validated work:** Full Next.js mileage tracker MVP (auth, vehicles, trips, IRS rates, deductions, exports, receipts, design system) ### Validation evidence The validate stage passed on 2026-06-10: - All key GET pages returned 200 - POST flows: register 201, login 200, create vehicle 201, create trip 201 - No 5xx responses ### Pull request opened https://github.com/raghu-cmyk/mileage-tracker-v6/pull/28 - **Base:** `mc_webhook_test` - **Title:** Build mileage tracker app – full MVP - **Issues referenced:** Closes #17-#25 - **PR open gate:** Passed (`open_prs=1`) ### Job signaled `mc done --summary "Opened PR for Build mileage tracker app into mc_webhook_test"` recorded for job `20260610T021749Z_a6cafd`. The chain supervisor will advance to the report stage next.
```

report — 20260610T021906Z_fcd192

```
## Build report complete PDF build report generated for chain `20260610T015817Z_3289dd` / story Build mileage tracker app. ### Saved path `docs/build-reports/report-20260610T022030Z.pdf` (9,950 bytes – passes the >2 KB gate) Full path: `/Users/raghuramreddy/intent_network /mission-control-latest/.claude/worktrees/20260610T015817Z_3289dd/docs/build-reports/report-20260610T022030Z.pdf` ### Commit

URL Pushed to `raghu-cmyk/mileage-tracker-v6` on branch `feat/chain-20260610T015817Z`:

```
**https://github.com/raghu-cmyk/mileage-tracker-v6/commit/11dc7ff** ### Report highlights | Stage | Job ID |
Duration | Gate | |-----|-----|-----|-----| | plan | `20260610T015817Z_277159` | 1m 6s |
`gate_min_issues` - PASSED (24 issues) | | implement | `20260610T015924Z_0ed8db` | 3m 44s | `no_todo_markers`
- PASSED (15/15 tests) | | validate | `20260610T020309Z_09605f` | 14m 40s | `VALIDATION_PASSED` - all GET 200,
POST 2xx/3xx | | deliver | `20260610T021749Z_a6cafd` | 1m 17s | `gate_pr_open` - [PR
#28](https://github.com/raghu-cmyk/mileage-tracker-v6/pull/28) | | report | `20260610T021906Z_fcd192` | in
progress | PDF gate satisfied | - **Total build time (plan → deliver):** 20m 48s (01:58:18Z → 02:19:06Z UTC)
- **Code stats:** 64 source files, 4,842 LOC, **15/15** tests passing - **Requirements mapping:** Issues
#17-#25 mapped to requirements $1-$9 in the PDF ### Completion signal ``bash mc done --job
20260610T021906Z_fcd192 --summary "Generated build report for Build mileage tracker app" `` Recorded
(`iter_outcome.kind=done`, `success=true`). The daemon will mark the report job completed once the agent
process exits and re-evaluates the PDF gate.
```

4. Validation Results (Gate Outcomes)

Stage	Gate	Outcome
plan	gate_min_issues.sh 3	PASSED — 24 planning issues on target repo (≥3 required)
implement	no_todo_markers (workspace)	PASSED — no placeholder markers; npm test 15/15; smoke OK
validate	test -f VALIDATION_PASSED	PASSED — all GET 200; POST register=201, login=200, vehicles=201, trips=201; no 5xx
deliver	gate_pr_open.sh mc_webhook_test	PASSED — PR open: https://github.com/raghu-cmyk/mileage-tracker-v6/pull/28
report	find docs/build-reports/report-*.pdf -size +2k	PASSED — this report

VALIDATION_PASSED: All GET pages loaded; POST flows OK (/api/auth/register=201, /api/auth/login=200, /api/vehicles=201, /api/trips=201); no 5xx

5. Total Build Time

33m 57s (01:58:18Z → 02:32:15Z UTC) across all five chain stages

6. Application Code Stats

Metric	Value
Source files (excl. node_modules, .next)	64
Lines of code (TS/TSX/JS/CSS/Prisma)	4842
Unit tests passing	15/15
Delivered branch	feat/chain-20260610T015817Z
Pull request	https://github.com/raghu-cmyk/mileage-tracker-v6/pull/28
